SUSPECT MEDICINE CABINETS

December minth, Bineteen twenty-six.

The Miami Cabinet Company, Middletown, Ohio.

Gentlemen:

ATTENTION: M. V. COFFEY

The Minmi Medicine Cabinets used on four hotels, which we have constructed and finished within the last year have proven very satisfactory both from the standpoint of quality and economy.

The architects and owners in connection with these same buildings are greatly pleased with the installations and we take this opportunity to say a good word for your product.

Very truly yours,

THE DAY & ZIMMERMANN ENGINEERING & CONSTRUCTION COMPANY

Gentlement

We have been using Miami steel cabinets extensively in our housing operations and have found them to possess exceptional quality in workmanship, design and finish.

We have found in our work they offer the best value obtainable in this line and in connection with your splendid cooperation as given us in the past we will certainly continue to use them in future operations.

Gentlemen; -

We have used a large number of Miami Cabinets in the past and have found them to be satisfactory in every respect.

We believe they are unequaled in design, construction and finish and the service you have given us on shipments has been of the very best.

We welcome this opportunity to say a word for your product and assure you that Mismi Cahinets will have every consideration on our future projects.

Yours very truly,

Department

A LEBER KINCALE

The Miami Cabinet Company, Middletown, Ohio

Gentlemen: ATTENTION: M. V. COFFEE

Your letter of May the 19th, addressed to Mr. Wood, has been referred to this Department for answer.

We are very pleased to say that the Miami Cabinet, fitted as directed by the American Hotel Corpor-ation, has been installed in the following hotels:-

The Half-Moon Rotel, Coney Island, M.Y. The Cavalier Hotel, Virginia Beach, Va. The Penm Beaver Hotel, Rochester, Pa. The Anthony Wayns Hotel, Hamilton, Ohio.

We are all extremely pleased with the installation.

Very truly yours,

THE AMERICAN HOTELS CORPORATION

WLD: MR

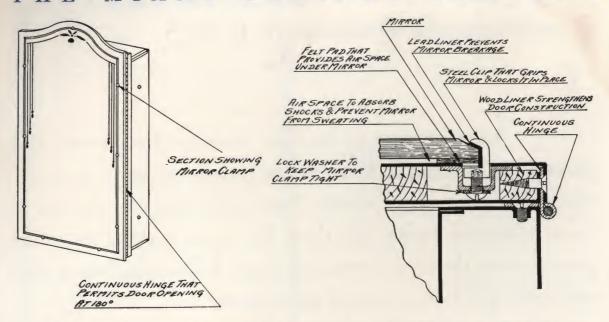

WhBell

PROGRESS S

As recently as the gay nineties the advent of a painted tin tub in the Master's bathroom was quite an event. Since that time great strides have been made in the art of beautifying the home, but there has been nothing more important than the transformation of the bathroom from a dark and dingy place to a room of rare charm.

Gleaming fixtures of trim design, set against a colorful background of exquisite floors and walls is the order of the day, and the bathroom of the most ordinary cottage is a model of beauty and sanitation that was unheard of a few years ago even in the finest homes.

In keeping pace with this march of progress, the Miami Cabinet Company has developed a selection of fine cabinets that give the last touch to a modern bathroom. Their indestructible and sanitary finish, known as Crystal Snow; their beautiful designs, executed by master craftsmen; their sturdy construction—which means long life—have gained an enviable reputation for Miami Cabinets in the building industry. In grateful appreciation for their enthusiastic endorsements this book is dedicated to the architects and builders of America.

GENERAL SPECIFICATIONS FOR VENETIAN CABINETS

THE Miami Venetian Cabinets shown on this and the succeeding page deserve a word of explanation. The design of all of these is similar to the extent that the door covers the entire front of the cabinet. This gives the appearance of an unusually beautiful mirror hung flush on the wall. A narrow portion of the door panel extending beyond the mirror is finished in such a way that it emphasizes the beauty of the cabinet, and the color scheme in each case has been carefully worked out to afford the most striking effect. These cabinets in their regular finish harmonize perfectly with a wall of any color, and it has been found that even a slight departure from the standard specifications will serve only to destroy the natural beauty of the mirror.

Door Construction: The type of construction used on all Miami Venetian doors is shown in the cross-section view above. Heavy steel panels, reinforced throughout with wood liners, cover the entire front of the cabinet and carry the mirror in such a way that breakage in transit is practically eliminated.

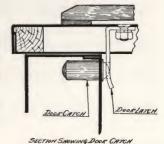

Mirror Clips: Mirrors are securely fastened to the door panel by attractive clips. This eliminates the piercing of the mirror for screws or rosettes, and reduces breakage. The clips are lined with soft lead and have a wide bearing surface which absorbs the strain without any tendency to chip the mirror.

Air Pocket: There is an air space between the mirror and the door panel, provided by felt pads at each clip. If this air space were not present the contact of the steel and the mirror would cause the latter to sweat with very injurious results to the silvering. Another important feature of the air

space is that it absorbs shocks caused by slamming the doors. The door on any Miami Venetian Cabinet can be slammed with full force without any fear of breakage.

Hinges: Any cabinet door that opens only part way is dangerous to the user and is liable to be broken. This problem is solved on Miami doors by using a full length piano hinge that makes possible a door opening of 180 degrees. This hinge also gives the maximum strength and durability.

Wall Openings: It is important to note that on all wall openings for Miami Venetian Cabinets equipped with razor blade drops, a hole must be left at the bottom of the header to permit the passage of the blades.

The Miami De Luxe

THE Miami De Luxe, styled by leading architects as a most artistic and practical development in bathroom equipment, represents our highest ideals in the art of cabinet construction. The color scheme of the De

Luxe is a replica of black and gold marble—a combination that gives it dignity, character and rare beauty.

The front of the cabinet is entirely covered by a handsome mirror mounted on a door panel finished in black and gold marble, and the mirror carries a beautiful design ingeniously etched to give the appearance of hammered gold.

The graceful contour of the center mirror is enhanced by side wings of similar design, and a mitred line etched in gold around each, carries out the color effect admirably. These wings can be adjusted to any desired angle, thus permitting perfect vision of the head, back and shoulders.

The final touch is achieved by the distinctive design of the brackets. Gargoyles made of bronze and finished with dull gold cast, serve to hold the light globes. The fact that the side wings are easily

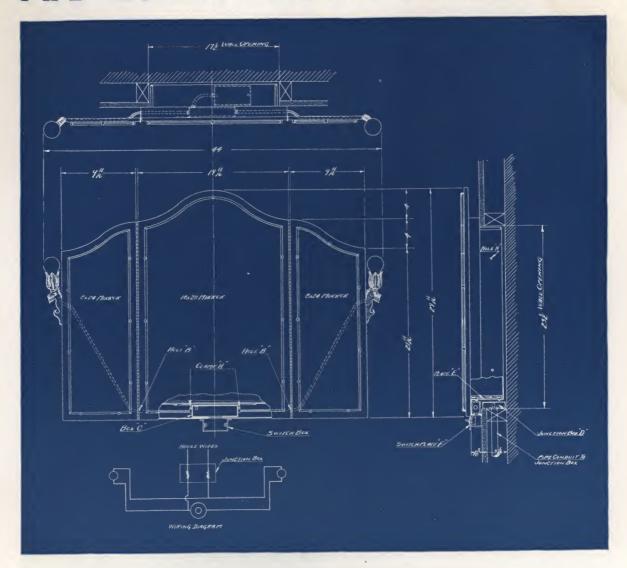

adjusted, makes it possible to concentrate the

light at any desired point.

Standard equipment in the De Luxe includes the light switch, designed in harmony with light brackets, radium switch discernible in the dark, wiring, and junction box. A locked compartment provides an excellent repository for poisonous medicines and a razor blade drop adds the last touch of convenience.

Model: De Luxe		
Center Mirror, beveled plate		18" x28"
Wing Mirror, beveled plate		8" x24"
Overall with wings		44½"x29¾"
Overall without wings		193/4 "x293/4"
Inside		
Wall Opening		17½"x23½"

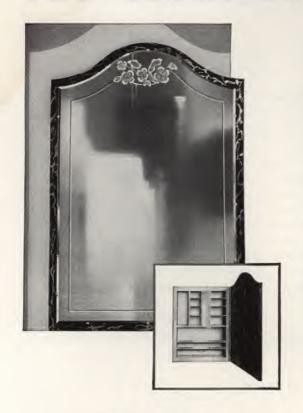

THE MIAMI DE LUXE INSTALLATION INSTRUCTIONS

- 1. Fasten wings to cabinet flange with 6-32 screws furnished.
- 2. Remove conduit clamp "A" from wing conduit.
- 3. Run conduit through hole "B" in cabinet flange.
- 4. Remove box "C" under cabinet flange.
- 5. Fasten wing conduit to box "C" with clamp "A."
- 6. Remove switch plate "F" and make connection as shown in wiring diagram.
- 7. Set junction box "D" in wall opening as shown and fasten to house conduit, allowing enough

- wire to make connection with cabinet wires.
- 8. Set cabinet in wall opening, raising same to top of wall opening, so it does not rest on junction box "D" and fasten in wall opening with 1½" round head wood screws and recessed washers furnished with cabinet through holes "H."
- 9. Remove plate "E" in bottom of cabinet and make connection to house wires in junction box.

The Victorian

In the Victorian, beauty and utility are combined to an unusual degree to provide a cabinet that meets the requirements of the most exacting. This model in common with the other Miami Venetian Cabinets is so constructed that the door hides the entire body. When closed, it presents the appearance of an unusually beautiful mirror hung on the wall. A delicate etching in gold and silver adds richness to the mirror that is in perfect harmony with the black and gold marble panel. Of interest from a practical standpoint is the slot for used razor blades on the inside of the cabinet. A locked compartment for poisonous medicines and black vitrolite shelves complete the equipment.

The Renaissance

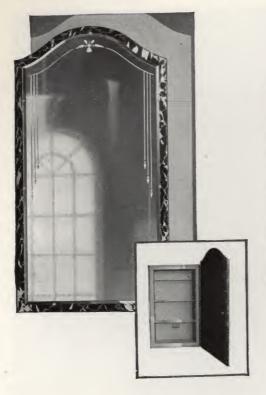

THE Renaissance receives its name from that period in the fifteenth century characterized by a revival in art and learning. The name is particularly appropriate because the Miami Renaissance also marks an important development—the artistic application of sound engineering principles to cabinet construction.

A beautiful design, consisting of three star-cuts finished in gold, adorns the mirror. The central figure in the top center is joined to the smaller cuts at either corner by graceful lines etched in silver that follow the contour of the mirror. Leaf-sprays complete the decoration and add a note of richness to the entire cabinet.

Regular equipment includes three extra heavy bulb edge glass shelves and a slot for used razor blades.

The Roman

THE Roman, of exceptionally graceful design, shown at the left, combines beauty and utility. The excellent proportion of width to height gives character and dignity to the mirror and results in a roomy cabinet that possesses much of the practical value of the larger types.

The mirror is etched entirely in silver; the design is simple but attractive, and is entirely in harmony with the lines of the cabinet. The central decoration is a four-pointed figure from which a small pendant is hung. Three parallel lines on either side of the mirror terminate in small pendants of attractive design, and these lines are joined at the top to the central figure by another line etched in silver and curved to follow the contour of the mirror.

The Colonial

THE simplicity and beauty of our early architecture is reflected in the cabinet shown at the right. A graceful mirror is mounted on a black panel fastened to the cabinet body with a full length piano hinge. The design of the mirror is very simple; the central figure—a six-pointed flower, similar to a fleur-de-lis—is etched in silver. Mitred lines run down each edge of the mirror and terminate in small pendants at the bottom. They are joined to the central figure by mitred lines, etched in silver. This model possesses the same careful workmanship and high standard of material of the larger

cabinet and combines with these attributes an economy of price that makes the Colonial exceptionally practical for the average apartment bathroom or downstairs lavatory.

MODEL NO. 100

Color! Color!

THE fundamental appeal of beauty is nowhere so evident as in the ever-increasing use of color in our surroundings.

Color makes the bathroom interesting, refreshing, beautiful. Gracefully formed fixtures, finished in blues, tans, orchids, and greens are set against equally colorful walls. This color appeal can be carried even to the Miami Cabinet over the lavatory, and at a very small additional charge, any model can be finished to match or contrast with the walls or other fixtures.

Note: The cabinets shown and listed on this page are regularly finished in White Crystal Snow. If they are wanted in color, at an additional charge, the order must specify the color, and a sample must be sent for matching purposes.

Model 100: This cabinet, shown above, is equipped with a locked compartment for poisonous medicines. The shelves are black Vitrolite and a slot for used razor blades is regularly furnished.

Model 150: Mcdel 150 is similar in appearance and size to the 100. It is equipped with three full width, extra heavy, bulb edged glass shelves, but it does not have the locked compartment. The slot for used razor blades is regularly furnished.

Model 1110: This model, shown at the right, has an open shelf below the door. It is equipped with a 16''x20'' beveled mirror, three full width, bulb edged glass shelves, and razor blade drop.

Model 110: This cabinet is similar to the model 1110. It has a 16"x16" beveled plate mirror, three full width, bulb edged glass shelves, and a razor blade drop.

MODELS NO. 310, 410, 360

Builder's Recessed Models

They are particularly recommended for bathrooms where cost is an important factor, but it is not to be understood that there is any departure from the same careful workmanship or high standards of material that characterize all Miami Products.

These Cabinets are made from heavy gauge steel, finished in "Crystal Snow" and equipped with air cushion doors that swing quietly on specially designed hinges, drop forged from solid brass. Three adjustable bulb edge glass shelves, a bullet catch and selected plain plate glass mirrors of high quality are standard equipment. If beveled mirrors are desired on any of these models they can be furnished at a slight additional charge.

Wall Cabinets

TWO models are designed to hang flush on the wall, Nos. 800 and 816. These cabinets are similar in appearance and construction to the recessed models, except that the return flange extends back to the wall. Wall type cabinets are recommended for use on thin walls where it is not possible to make a full recess, or in old construction where it is not desirable to cut a wall opening.

This model can be used to excellent advantage as a towel supply cabinet in commercial buildings. In combination with a towel bar at the bottom or a towel tray at the top it affords a very attractive and practical installation.

Recessed Mirrors

The model shown at the left consists of a plain mirror with a recessed shelf below. It is a good combination for use in a downstairs lavatory, or wherever a full cabinet is not necessary. Equipped with the American Standard accessories shown on the succeeding page, the 4RS is very practical for hotel installation, as the recessed shelf affords ample space for the toilet articles of a transient guest.

The Stevens

HERE are some cabinets designed particularly for hotels and large apartments. None of these models are carried in regular stock but can be made up on order whenever the quantity permits economical production.

The cabinet on the left was built especially for the Stevens Hotel in Chicago and has met with such popular favor that we have included it as a regular model in our hotel cabinets. The graceful crown piece of the Stevens relieves the square lines of the frame, and the embossed panel and beveled door frame add a very neat touch to the finished cabinet. Regular equipment includes sockets for the light globes. The connection is made with the house wires in the junction box at the top of the cabinet.

Model 100=B

WHERE hotel construction demands a cabinet that will permit access to the pipe shaft, we recommend our model No. 100-B. It is by far the most practical type of access cabinet that has ever been devised and the recessed shelf below the mirror provides all of the space ordinarily required for the toilet articles of the transient guest.

A large opening to the pipe shaft can be had by swinging the body of the cabinet out from the buck.

This can be done very quickly without disturbing the contents of the shelf. When closed, the cabinet is locked in the buck by a screwdriver catch operating through the return flange.

The accessories shown on the opposite page can be attached to this cabinet without interfering in any way with the access feature.

The Ideal Cabinet for Hotels and Clubs

A FEW years ago, a group of hotel men outlined to us their conception of a thoroughly practical cabinet for hotel use. Our engineers and designers working in conjunction with these hotel men finally developed the American Standard model shown above. Its neat, compact design makes it an attractive addition to any hotel bathroom, but its chief advantage lies in the increased convenience for the guest and a material reduction in the initial cost of the hotel. By use of this cabinet, all of the accessories commonly found in the bathroom are concentrated at the most convenient point.

Of importance is the fact that actual cost records from the files of engineers who have used this model agree that it saves between five and eight dollars a bathroom over the old-fashioned plan of installing a

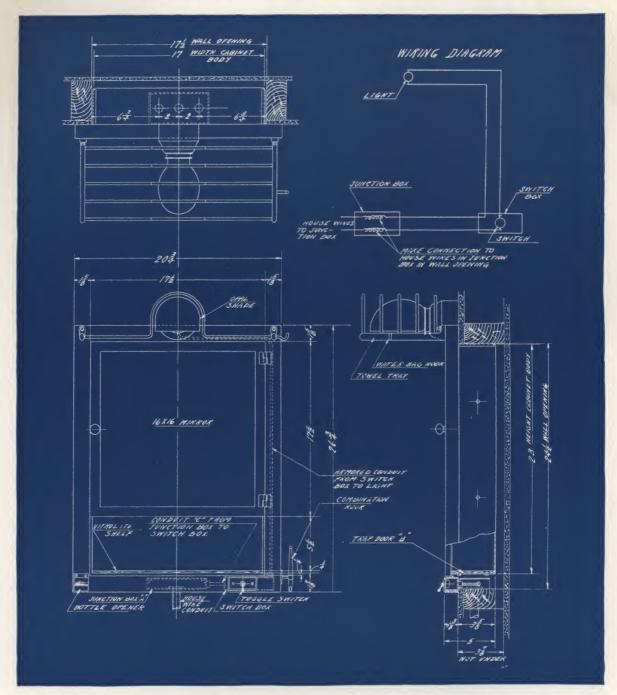

cabinet and the fixtures separately.

EQUIPMENT. The following accessories are attached to the cabinet; overhead towel tray, water bag hook, combination used towel and razor strop hook, center light fixture, "complete with opal" shade and holder, luminous tipped switch, switch box, junction box, razor blade drop, bottle opener, and vitrolite shelf. The wiring is concealed in a flexible steel conduit and the cabinet is shipped to the job ready for installation with the exception of the towel tray, which can be quickly attached. Complete instructions for connection with the house wires and installation are given on the back of this page.

These same accessories can be attached to any Miami recessed mirror or cabinet except the Venetian models. For transient hotels the recessed mirror with American Standard equipment is particularly

recommended.

Mirror						16" x16"
Overall						20 ³ / ₄ "x26 ³ / ₄ "
Inside						16 ³ / ₄ "x22 ³ / ₄ "
Wall On	eni	nø				$17\frac{1}{2}$ "x24\frac{1}{2}"

INSTALLATION INSTRUCTIONS—AMERICAN HOTEL CABINET

- 1. Set junction box "A" in wall opening as shown and bring house wires into same.
- 2. Set cabinet into wall and remove trap door "B" in bottom of cabinet.
- 3. Bring conduit "C" to junction box "A" and fasten with clamp furnished on end of conduit "C."
- 4. Make connections of house wires to wires in conduit "C."

The Imperial

THE Imperial, consisting of a Venetian mirror equipped with side lights and projecting shelf, is an unusually beautiful unit. The light brackets and shelf supports of distinctive design harmonize perfectly and the black and gold marble effect of the frame blends nicely with the dull gold cast of the fixtures. A black vitrolite shelf adds beauty to the entire unit.

A wall switch should be installed to control the lights which are easily and quickly connected with the house wires in a wall box behind the mirror.

The Premier

THE Premier combines the beauty of the Venetian mirror with the utility of a recessed cabinet. A capacious pocket below the mirror recessing into the wall to a depth of four inches furnishes an excellent repository for a few toilet articles and makes this unit very practical for the average hotel bathroom.

The design of the mirror is accentuated by the plain black frame which contrasts pleasantly with the gleaming white of the recessed shelf; the appearance of the entire unit is one of simple dignity.

Venetian Mirrors

THE TUDOR
Mirror 18"x28" Bev. pl.

THE Venetian mirrors shown on this page are made to hang flush on the wall by means of invisible screws. The beveled plate mirrors are mounted on steel frames, finished in black and gold marble and are delicately etched with beautiful designs that give them an exceedingly rich appearance.

The use of these mirrors is not restricted to a particular room in the home. They add a distinctive and interesting touch to any wall they adorn and are especially effective in reception halls or living rooms.

QUEEN ANNE
Mirror 14"x28" Bev. pl.

Marrow Framed Mirrors

MODELS 1N, 2N, 3N

MODELS 1N, 2N and 3N, shown at the lower left, are especially adapted to hospital installation because of the sanitary features of their Crystal Snow finish. They are hung flush on the wall by means of invisible screws and can be equipped with accessories, such as, towel tray, projecting shelf, or towel bar if desired.

Mirror 14"x22" Bev. pl.

THE Miami Ironing Board is a real step saver in any home. It is made to fit between standard studding and is so compact that it conserves space to a maximum degree. One of the most important features of this cabinet is that the Board can be raised or lowered to suit the convenience of the operator. When the cabinet is installed fifteen inches above the floor line, the board can be brought to a height of thirty-two, thirty-four or thirty-six inches.

The Cabinet itself is furnished in either white "Crystal Snow" or if desired, can be had in Prime Coat so that it can be painted after installation to match the trim in the kitchen or wherever it happens to be installed. At a slight additional charge, the Miami Ironing Board can be equipped with a hot plug for electric iron or sleeve board for ironing small articles.

Note: If the ironing board is ordered with a hot plug, it is important to remember that the wall opening must be increased one inch in height to provide space for the plug.

There is a broom clip on the back of the door and ample space in the bottom of the cabinet for iron storage thus making the Miami Laundry Queen a model of convenience and utility.

General Specifications

THE high standard of design, materials and workmanship embodied in the manufacture of Miami Cabinets is reflected in the following important features:

Materials: Miami Cabinets are made from heavy gauge Armco Steel. Auto body stock of unusual strength is used in all models.

Mirrors: Only the finest quality of selected plate glass is used in Miami Cabinets and they are hung in the door frame in such a way that they can easily be replaced.

Shelves: An unusually practical feature is the bulb edge adjustable glass shelves on all models securely held in specially designed brackets

that prevent tipping. The shelves may easily be removed for cleaning.

Hinges: Specially designed hinges drop forged from solid brass, provide outstanding beauty and maximum strength. The hinges are bolted, not spot welded, to the flange and securely held by lockwashers. As a consequence, Miami doors will never sag, and it is important to note that these hinges allow the door to open a full 180 degrees and prevent the knob from striking against the wall.

Door Construction: The doors on all Miami Cabinets are one-half an inch thick. They are carefully built to give the best service, and air cushioned to absorb shocks caused by slamming. Wood liners hold the mirrors securely in place, while a heavy packing protects them from moisture.

Knobs: Attractive glass knobs easily replaced if broken, are furnished on all models.

Crystal Snow Finish: The most important item on any bathroom cabinet is the finish applied to it. Ordinary baked enamel cannot withstand the adverse atmospheric conditions to which it is commonly subjected. Even the finest enamel will eventually discolor with age and will crack, craze or peel. "Crystal Snow" of a pyroxylin nature, applied by a special process, is guaranteed to withstand these ravages of time. It is extremely durable, cannot discolor with age, crack, craze or peel and will in fact, retain its newness indefinitely.

Cartons: Miami Cabinets are shipped in exceptionally strong cartons that practically eliminate any chance for breakage in transit.
